### Social Protection for PLHIV—Analysis of Schemes

- Ministry of Rural Development | 45
- Ministry of Women and Child Development | 52
- Ministry of Health and Family Welfare | 59
- Ministry of Housing and Urban Poverty Alleviation | 61
- Ministry of Social Justice and Empowerment | 63
- National Legal Services Authority (NALSA) | 64
- Ministry of Labour and Employment | 66
- Department of Food and Public Distribution | 67
- Other Ministries | 69
India has about 2.25 million people living with HIV, with an adult prevalence of 0.31% in 2009. There is a steady decline in prevalence over the years from 0.41% in 2000 through 0.36% in 2006 to the current level in 2009. This trend is an outcome of effective strategies of programming in the last 3 decades in the country. At the same time the coping capacities of PLHIV to the social and economic impacts of HIV continue to challenge the uptake of prevention as well as treatment services. Impact challenges relate to, among others, job security, poor access to health care facility, low access to nutritional support and education for children. Studies have shown that stigma and discrimination related to HIV severely impedes access of PLHIVs to livelihood options and treatment access minimising the opportunities to earn and remain healthy. There is, thus, a need for creative response to ensure that PLHIV have access to many of these critical needs for their sustenance.

According to the 2006 UNDP NACO NCAER study average HIV household income is lower by 34% than non-HIV households. It is also evident that HIV widow households are economically worse off than other HIV households with lower incomes, poorer living conditions, fewer amenities at home with higher borrowings or asset liquidation. Close to 40% of adults living with HIV, in the country are women, of whom 43% live alone without any kind of assets and support systems. It is clear that there is an urgent need to protect people living with HIV, especially women, from further socio-economic shocks. Social Protection schemes play a crucial role in helping PLHIV in managing such shocks.

Social Protection refers to public interventions to assist individuals, households and communities to manage risk better and that provide support to the critically poor.¹ National AIDS Control Programme in India, with technical support from UNDP, has been focusing on improving access of the PLHIV to the existing social protection schemes. Efforts have been made to adapt the existing schemes to include PLHIV (HIV-sensitive) as well as to initiate new schemes that direct address the issues of PLHIV (HIV-specific).

¹ From Safety Net to Springboard - Social Protection Sector Strategy; World Bank 2001
This document is an effort to put together a list of key social protection schemes that could be accessed by the PLHIVs in India. The schemes have been categorised as preventive, protective and promotive measures based on the following understanding:

**Preventive** - seek to avert deprivation and deal directly with poverty alleviation. They include social insurance for economically vulnerable groups and, in agriculture, strategies of crop or income diversification.

**Protective** - provide relief from deprivation. Examples include social assistance for those unable to work and pensions. Other protective measures can be classified as social services, such as free health services.

**Promotive** - aim to enhance real incomes and capabilities, which is achieved through a range of livelihood enhancing programmes targeted at households and individuals, such as micro-finance.

The latter section contains information and analysis of some key schemes.\(^2\)

---

\(^2\)This analysis was done by PWN+, the national organisation of WLHIV, with support from UNDP and Swasti, and presented to the Planning Commission in June 2011. This summary derives the issues, challenges and recommendations from the experiences of WLHIV in accessing the schemes.
List of schemes
## Schemes that can be accessed by PLHIV
### Schemes Implemented Centrally

| 1      | Indira Gandhi National Widow Pension Scheme (IGNWPS) | Ministry of Rural Development | Widows aged 40-64 years of age; from a household below the Poverty Line. | **Benefits:**  
- The pension amount is Rs. 200 per month per beneficiary; state governments are urged to provide equal amount.  
- The pension is to be credited into a post office or public sector bank account of the beneficiary.  
- Discontinued in case of remarriage or once the widow moves above the poverty line. | Changes for PLHIVs have been introduced in several states like Nagaland, Delhi, Bihar, Andhra Pradesh etc  
- Include PLHIV within the scheme as a special category beneficiary and remove the age limit. (This has been successfully done in the state of Nagaland)  
- Increase the amount received, as Rs. 200 is a very little amount  
- Make the procedures simple, less stigmatising for PLHIV – if their status has to be revealed. | [http://nsap.nic.in/Guidelines/modifications%202007.pdf](http://nsap.nic.in/Guidelines/modifications%202007.pdf) |
| 2      | Indira Gandhi National Old Age Pension Scheme (IGNOAPS) | Ministry of Rural Development | All persons of 65 years and above belonging to below the poverty line | **Benefits:**  
- Rs. 200 per month per person | Not done  
- Reduction of the age criteria for PLHIV | [http://nsap.nic.in/Guidelines/modifications%202007.pdf](http://nsap.nic.in/Guidelines/modifications%202007.pdf) |

| 11    | Integrated Child Development Scheme   | Ministry of Women and Child Development    | ● Children below 6 years  
   ● Pregnant and lactating women  
   ● Women in the age group of 15 to 44 yrs | The ICDS is the largest programme for promotion of maternal and child health and nutrition in India and the world. The program provides an integrated approach for converging all the basic services for improved childcare, early stimulation and learning, health and nutrition, water and environmental sanitation aimed at the young children, expectant and lactating mothers, other women and adolescent girls in a community.  
   ● Enrollment to the scheme is through the Anganwadi Centre  
**Objective**  
To improve the nutritional and health status of children in the age-group 0-6 years;  
To lay the foundation for proper psychological, physical and social development of the child;  
To reduce the incidence of mortality, morbidity, malnutrition and school dropout;  
To achieve effective co-ordination of policy and implementation amongst the various departments to promote child development; and  
To enhance the capability of the mother to look after the normal health and nutritional needs of the child through proper nutrition and health education. | Not done  
   ● Additional nutritional support (iron and protein rich) to girls and children living with HIV.  
   ● Adequate sensitisation and skill building for AWW and helpers in AWC on issues of PLHIV.  
   ● Sensitisation efforts among key stakeholders and in the community on issues of PLHIV and work on myth and misconception that will reduce stigma and discrimination.  
   ● In villages where the number of PLHIV is high, AWC can become an outreach support for various services under NACP - like following up for antiretroviral treatment, referring known cases of high risk to Integrated Counselling and Testing Centres and STI clinics, etc. | http://wcd.nic.in/icds.htm |
| 12    | Implementation of Kasturba Gandhi Balika Vidyalaya | Ministry of Human Resource Development | Girl Child from SC, ST, OBC and minorities | Setting up residential schools with boarding facilities at elementary level to ensure access and quality education to the girls of disadvantaged groups of society belonging predominantly to the SC, ST, OBC and minorities in those Not done  
   ● Scheme eligibility to expand to include infected or affected girl child.

Summary and Analysis of Some Key Schemes of Different Ministries from the Perspective of Women Living with HIV

This section contains information and analysis of some key schemes. This analysis was done by PWN+, the national organisation of WLHIV, with support from UNDP and Swasti, and presented to the Planning Commission in June 2011. This summary derives the issues, challenges and recommendations from the experiences of WLHIV in accessing the schemes.
Scheme 1

1. Name of the Scheme

Indira Awas Yojana (IAY)

2. Brief Description

The objective of the Indira Awas Yojana is primarily to help construction/up gradation of dwelling units in rural areas. Indira Awas Yojana is a Centrally Sponsored scheme funded on cost-sharing basis between the Government of India and the State Governments in the ratio of 75:25.

3. Relevance of the Scheme

- Scheme is very relevant for the PLHIV as it addresses the important need of shelter for them.
- Many of the women living with HIV experience destitution as they are thrown out of their homes (parental or marital).
- NACO- NCAER-UNDP study shows that around 90% women are thrown out of married homes after the husband dies of AIDS.
- Homelessness would further increase their vulnerability as a result of unhygienic living condition, poor access to health care, nutrition and access to many of the services. They will also be at high risk to violence.
- It is difficult for PLHIVs, especially women, to get a home for rent – particularly if the status is known. Even if the status is not known, there is always the fear that they will be discovered and thrown out.

Rangamma (name changed), 28 year old woman from Andhra Pradesh, had no home of her own after the death of her husband with two small children to look after. She accessed the IAY scheme and this is what she had to say: “……today, even though my husband is not there, we have a shelter to live in. Otherwise house rent will be an additional burden to me that increases my vulnerability.”

Houses made under the IAY are based on quality standards and have smokeless chulha (PLHIV are prone to TB and co-existence of HIV & TB infection is common) and toilet, which improves quality of life, and prevents illness.
4. Issues and Challenges of PLHIV

- A number of PLHIV are not falling under the selection criteria for IAY and are not able to access the scheme.
- There is no special provision for PLHIV under this scheme and PLHIV are reluctant to take this issue up as this may reveal their identity.
- Inherent challenges in the IAY programme as experienced by PLHIV
  - Cumbersome process (including getting multiple signatures and documents) and repeated visits to government offices to get the scheme sanctioned. This becomes difficult for PLHIV due to their bad health and even more so for a woman.
  - Amount is inadequate given the rise in cost of materials.
  - Even if sanctioned, corrupt practices and unjustified demands make it impossible for women living with HIV. Involvement of politicians makes it worse (e.g., centralisation of power in politicians in the north east).
  - Delays in approval, grant release and implementation.

5. Recommendations

- Include PLHIV within the scheme as a special category beneficiary
- Make the procedures simple, less stigmatising for PLHIV – if their status has to be revealed.
- Reduce the grant release to two installments to avoid delays in release.
- Ensure that houses are not allotted for PLHIV in isolation from others (leading to ghettoising) and not demarcated with a name (such as Beggars Colony for beggars).

Scheme 2

1. Name of the Scheme

Swarnjayanti Gram Swarozgar Yojana (SGSY)

2. Brief Description

The objective of the Swarnjayanti Gram Swarozgar Yojana (SGSY) is to bring the assisted poor families (Swarozgaris) above the Poverty Line by ensuring appreciable sustained level of income over a period of time. This objective is to be achieved by, inter alia, organising the rural poor into Self Help Groups (SHGs) through the process of social mobilisation, their training and capacity building and provision of income generating assets.
3. Relevance of the Scheme

- In a study done by NACO-NCAER-UNDP on Macro-Economic Impact of HIV and AIDS in India (2006), it was found that household income within the HIV household decreased by 66.25% due to rising cost of treatment and loss of job. Per capita monthly expenditure was four times higher than the non-HIV household due to treatment costs. It was also reported that close to 46% of the HIV households borrowed from money lenders to meet the rising cost of living, compared to only 27% of non-HIV households.\(^1\)

- Several women face destitution and denial to property after the death of their positive husbands. They are unable to raise voice, seek justice due to fear of stigma from community.

- Loss of job due to status being known or absenteeism due to illness – results in decrease in income.

- Poverty is thus one of the major shocks experienced by an HIV household requiring support in poverty reduction strategies.

*Santhi (name changed), a woman in her late 20s from Kerala, had an ailing husband due to AIDS and with increased treatment cost had lost all the properties. She is also infected but healthy. Supported by the District network through a loan, which she invested in small business, she is able to meet the cost of treatment and maintain a reasonable living condition.*

- Support from NGOs, civil society and private sector is project-based and not sustainable.

- Several positive women have formed SHGs of their own and are in a position to access this scheme. However, they are not allowed to become members of federations, a pre-requisite for bank loans.

SGSY scheme, modified to address the needs of WLHIV would be of great support in improving their household income and reducing poverty levels.

4. Issues and Challenges of PLHIV

- WLHIV groups are not granted loans by banks due to their positive status, lack of security/collateral and low savings of WLHIV groups (due to lack of family income to support the women).

- WLHIV are scattered and this impacts the functioning of the SHG. Becoming a member of a mixed group is difficult as other members do not welcome WLHIV.

---

\(^1\) [http://data.undp.org.in/hiv/BigPicture.pdf](http://data.undp.org.in/hiv/BigPicture.pdf)
5. Recommendations

- Include PLHIVs as a beneficiary group in the scheme and support formation of SHGs of WLHIV.
- PWN/women resource centers should become mother-NGO and get assistance for support to and monitoring of WLHIV groups.
- Improve access to credit facility, ensuring confidentiality and without being stigmatised.
- Focused training and skill building support for initiating income generation activities – given their physical and health condition.
- Sensitise Block SGSY Committee, Banks, DRDAs to the issues and needs of PLHIV, especially women.
- Block SGSY committee, while selecting the activities for funding, should give priority to PLHIV groups.
- Waive minimum duration of existence for accessing of scheme for WLHIV.
- Relax collateral requirement for WLHIV.
- SGSY should recognise that WLHIV are bankable and have used other sources for funding which have worked.

Scheme 3

1. Name of the Scheme

National Rural Employment Guarantee Scheme (NREGA)

2. Brief Description

The Mahatma Gandhi National Rural Employment Guarantee Act aims at enhancing the livelihood security of people in rural areas by guaranteeing hundred days of wage-employment in a financial year to a rural household whose adult members volunteer to do unskilled manual work.

3. Relevance of the Scheme

- The NACO-NCAER-UNDP study (2006) found that unemployment within the HIV household increased from 3.6% to 9.8%.
- Key reason for unemployment is increased frequency of ailments.
- 74% PLHIV did not disclose their HIV status in the workplace due to fear of losing job.
- Pressure to earn is great as 71% of PLHIVs had dependents half of whom were sole breadwinners of the family. Almost 50% were in debt.2

2 http://data.undp.org.in/hiv/BigPicture.pdf
Thus on the one hand increase in expenditure and on the other hand a shaky employment situation further pushes PLHIV into poverty. Therefore access to employment is a critical need of PLHIV.

4. Issues and Challenges of PLHIV

- NREGA most often offers only physical hard labour which makes it difficult to access for most of the PLHIV who are on ART and in bad health condition.
- Though there is provision to provide softer work under the schemes to PLHIV in some of the states, due to lack of communication, officials are not aware of this and therefore, PLHIV cannot take advantage of this benefit.
- Stigma and discrimination and breach of confidentiality are major issues for accessing the scheme under provision for PLHIV to do softer work.
- The officials lack sensitivity towards PLHIV.

5. Recommendations

- Sensitise NREGA officials to the issues and needs of PLHIV, especially women.
- Provision of softer job to PLHIVs and add PLHIV as a special category beneficiary within the scheme.
- In case PLHIV have no access to soft work – should have access to daily unemployment allowance.
- Soft work – should be defined in consultation with NACO and network of PLHIV.
- Women and girls infected and affected by HIV should be given preferential allocation for work to ensure steady income.
- WLHIV on ART should be given short breaks periodically during the day, if needed.

---

**Scheme 4**

1. **Name of the Scheme**

   **Indira Gandhi National Widow Pension Scheme (IGNWPS)**

2. **Brief Description**

   The objective of the scheme is to benefit widows in the 45-64 age group who fall under the poverty line by providing them a pension amount of Rs. 200/- every month. It is withdrawn if the woman remarries or moves above the poverty line.
3. Relevance of the Scheme

- WLHIV are unable to have a permanent employment or a constant source of income, as the illnesses associated with HIV make them too debilitated to work or due to the stigma associated with the positive status.
- The woman often faces rejection from her family (both natal and marital) due to her status as a widow and as a PLHIV and thus lacks support.
- 90% of the HIV widows in the NACO-NCAER-UNDP study were forced to leave their marital homes.
- 79% of positive women were denied a share in their husband’s property.
- 43% positive women were living alone.
- The inability to work, or secure an employment causes them to be unable to generate income for the family responsibilities.
- The PLHIVs also need to be on ART, and to respond to ART well, they need to have proper nutrition, securing which requires money.

Thus, support from the state for subsistence becomes absolutely essential for PLHIV widows.

4. Issues and Challenges of PLHIV

- Most WLHIV become widowed at a young age and do not fall in the required age group of 45-64 years and thus, unable to access the scheme.
- Inherent challenges in the scheme as experienced by PLHIV
  - Amount is inadequate given the rise in cost of materials
  - Need to get signatures of the Ward Counsellor, Tahsildar and MRO of the mandal – makes the process time consuming andcumbersome.

5. Recommendations

- Include PLHIVs within the scheme as a special category beneficiary and waive the age criterion for them. (This has been successfully done in the states of Nagaland, Tamil Nadu and should be done centrally)
- Increase the pension amount; Rs. 200 is a very insufficient amount. The pension amount should be increased. While rice, dal can be being provided through other schemes, there is a need for intake of fresh vegetables and additional medicines for PLHIV. Therefore, the need for increased pension.
- Make the procedures less stigmatising for PLHIV – if their status has to be revealed.
- Easier and hassle-free documentation criteria – affidavit or death certificate should be enough.
- Speedy approval and disbursal of entitlement.
Scheme 5

1. Name of the Scheme

National Family Benefit Scheme

2. Brief Description

The objective of the scheme is to provide work, education and social assistance in case of old age, sickness, disablement and other deserving cases. The programme essentially looks at assisting people, especially destitute families and mothers living in poverty to tide over the illness and death of the breadwinner. The financial assistance given to the family is Rs.10,000 on the death of the breadwinner and Rs. 200 per month as pension.

3. Relevance of the Scheme for PLHIV

- Women living with HIV, due to their positive status and often experience destitution after the death of the husband, and are pushed into poverty with limited access to resources to meet their and family’s needs.
  - 90% of the HIV widows in the NACO-NCAER-UNDP study were forced to leave their marital homes.
  - 79% of positive women were denied a share in their husband’s property.
  - 43% positive women were living alone.
- Majority of widows living with HIV/AIDS are in the 18-35 age groups. Many of them are compelled to do sex work to support themselves and their children.
- Extension of this programme would enable them to improve their lives and access better health care, psycho-socio support etc.

4. Issues and Challenges of PLHIV

- Not all PLHIV come under the BPL category and would therefore not be eligible for the scheme even though there is a need for such a coverage.

5. Recommendation

- All widows of PLHIV should be eligible automatically irrespective of BPL status.
- Make the procedures less stigmatising for PLHIV – if their status has to be revealed.
- Easier and hassle-free documentation criteria – affidavit or death certificate should be enough.
- Speedy approval and disbursal of entitlement.
Scheme 1

1. Name of the Scheme

Short Stay Home for Women and Girls

2. Brief Description

Categories of women/girls/children included under this scheme include those who have been forced into prostitution, leave their homes without any means of subsistence and have no social protection from exploitation and are facing litigation on account of marital disputes, sexually assaulted, victims of mental maladjustment, emotional disturbances and social ostracism, those who escape from their homes due to family problems, mental/physical torture and need shelter, psychiatric treatment and counselling for their rehabilitation and re-adjustment in family/society.

3. Relevance of the Scheme for PLHIV

- Evidence shows that more than 80% women get thrown out of their homes after death of an HIV infected husband or when their positivity is disclosed.

- Homelessness would further increase their vulnerability as a result of unhygienic living condition, poor access to health care, nutrition and access to many of the services. They will also be at high risk to violence.

- 79% of positive women were denied a share in their husband’s property.

- 43% positive women were living alone.

- It is difficult for PLHIVs, especially women, to get a home for rent – particularly if the status is known. Even if the status is not known, there is always the fear that they will be discovered and thrown out.

During homelessness, it is important for WLHIV to have a safe place to live in with hygienic conditions and access to basic amenities and nutrition – till they find or can afford a more permanent residence.

An educated WLHIV who works in the development sector often regales the story of how she has had to change house 19 times in the past few years due to stigma and/or unsafe conditions and the difficulties she faces in finding a place to stay in during the frequent changes.
4. Issues and Challenges

- Awareness of facilities and services rendered by short stay homes is limited in the general community as well as PLHIV.
- Many women living with HIV (WLHIV) avoid availing services at the home due to their previous experience of stigma and discrimination in the health or other facility.
- These short stay homes are located in major towns and cities and their access is limited. PLHIV are living across various villages and will find it difficult to reach.
- Many of these short stay homes are overcrowded and inmates are not able to get proper services.
- As medical check-up is compulsory for stay at the home, most WLHIV are hesitant due to fear of disclosure.
- WLHIV are not welcome in short stay homes.

5. Recommendations

- Special short stay homes are required for WLHIV and other homeless/destitute women – apart from the existing facilities which are meant only for those who are arrested/rescued.
- Wider awareness about this scheme and the services that are offered here is needed.
- Staff and other inmates of short stay homes need to be sensitised about issues regarding confidentiality, care and support to ensure stigma free environment.
- Increase the stipend for WLHIV inmates.

Scheme 2

1. Name of the Scheme

Nutrition Programme for Adolescent Girls (NPAG)

2. Brief Description

The scheme addresses the problem of under-nutrition among adolescent girls. Under the programme, special additional assistance has been given to the states to provide food grains (rice in Sikkim) to the identified beneficiaries totally free of cost through PDS (Public Distribution System) @ 6 kg of Rice per beneficiary per month.
3. Relevance of the Scheme for PLHIV

- Malnutrition weakens the immune system increasing the vulnerability and susceptibility to infections. HIV infection further deteriorates the immune system.

- Adolescent girls living with HIV/AIDS are more vulnerable to many deficiencies and infections due to their poor immunity and other vulnerabilities.

- HIV causes mal-absorption and excess nutrient loss that further increases their nutritional requirement.

- Low economic family background aggravates the vulnerabilities. They have very poor access to nutritious food intake and increase their vulnerability to several of the infections.

- A recent study by UNICEF has reported that 50% of the adolescent girls in India are anaemic (56%)³. Further the study said - 47% girls in the age group of 15 - 19 year are underweight and 43% of girls were married off before the age of 18. HIV prevalence rate among girls in the age group of 15 to 19 years is 0.07%.⁴ High level of malnutrition among adolescent girls coupled with HIV prevalence makes the need for nutritional support very high.

4. Issues and Challenges of PLHIV

- The scheme has not so far been availed by WLHIV and therefore no issues or challenges have come up as yet.

5. Recommendations

- Include PLHIV adolescent girls as one of the key beneficiary groups under this scheme.

- Additional nutritional support (iron and protein rich) to girls and children living with HIV

- Angan Wadi Workers should be trained to address the issues of HIV infected and affected adolescent girls.

- Priority focus by AWW on infected girls while following up on accessing the support.

- Ensure confidentiality while placing the name with Gram Sabha.

- Ensure presence of women panchayat leader at the point of weighing.

- Additional nutritional support (iron and protein rich) to girls and children living with HIV.

---

³ http://southasia.oneworld.net/todaysheadlines/over-50-adolescent-girls-in-india-anaemic-unicef

⁴ International Institute for Population Sciences (IIPS) and Macro International (2007) 'National Family Health Survey (NFHS-3) 2005-06', India: Volume 1
Scheme 3

1. Name of the Scheme

Rajiv Gandhi Scheme for Empowerment for Adolescent Girls (RGSEAG)

2. Brief Description

Focus of this scheme is self-development and empowerment of adolescent girls; improvement in their knowledge on health, hygiene, nutrition, reproductive & sexual health, family, child care; up-gradation of home-based skills, life skills and vocational skills; mainstreaming of out of school girls; information and guidance on existing public services such as PHC, CHC, Post Office, bank, police station, etc.; nutritional supplements.

3. Relevance of the Scheme for PLHIV Adolescent Girls

- Adolescence is an age of constant turmoil due to psychological and bodily changes an adolescent go through. Experience becomes much more acute for an HIV infected or affected adolescent, particularly girls.

- By this period most of the infected or affected adolescent girls would be orphaned or is living with an ailing parent. Being the daughter of a PLHIV increases stigma and discrimination from community they live in, school they study in and their own relatives. This heightens their experience of trauma – affecting their mental and psychological growth.

- There are anecdotal evidences of single infected mother struggling to handle the stress that their children go through, particularly the adolescents.

- Adolescent children and girls living with HIV very often have physical and mental under-development as compared to other children of similar age. The nutritional packages and the special therapies being provided under this scheme would help the adolescent girls living with HIV immensely in this regard.

- The current National AIDS Control Programme does not provide any psycho social and empowering support to Adolescent Girls who are either infected or affected by HIV and AIDS.

- Groups like Sakthis and Sahelis would enhance the life skills of these girls and allow them to overcome barriers and access the health care system, which their mothers hesitated to do.

- Given these circumstances and due to their socio-economic background with limited access to any psycho-social support, RGSEAG is an ideal scheme that could be of great support to the adolescent girls who are infected or affected by HIV.
4. Issues and Challenges of PLHIV

- The stigma and discrimination that prevails in society makes it difficult to club adolescent girls infected and affected with HIV/AIDS with other adolescent girls’ group.

5. Recommendations

- At least in high HIV-prevalence districts, special focus should be given to infected and affected adolescent girls under the scheme.

- In collaboration with NACO, special packages to address issues of positive adolescents should be introduced in the training kits of AWW. The life skill programme already available could be combined with the life skill training under this scheme to improve the access to health care through ART centres.

- Anti-Retroviral Therapy (ART) Centres should also be designated as Centres for implementation of this scheme to facilitate reaching the adolescent girls living with HIV with the services/facilities. Where not feasible, close coordination between the District Hospitals and ART Centres should be ensured.

Scheme 4

1. Name of the Scheme

Support to Training and Employment Programmes for Women (STEP)

2. Brief Description

The STEP scheme mobilises women in small viable groups, provides training for skill upgradation and makes facilities available through training and access to credit. The scheme enables groups of women to take up employment-cum-income generation programmes of their own (including backward and forward linkages). It provides support services for further improving training and employment conditions for women. The integrated package also provides health check-ups, referral services, mobile crèches and educational facilities.

3. Relevance of the Scheme for PLHIV

- Women living with HIV, due to her status and often after the death of her husband, experience destitution and are pushed into poverty with limited access to resources to meet her and family’s needs.
  - 90% of the HIV widows in the NACO-NCAER-UNDP study were forced to leave their marital homes.
  - 79% of positive women were denied a share in their husband’s property.
  - 43% positive women were living alone.
Majority of widows living with HIV/AIDS are in the 18-35 age groups. Many of them are compelled to do sex work to support themselves and their children.

Extension of this programme would enable them to improve their livelihood and access better health care, psycho-socio support etc.

4. Issues and Challenges of PLHIV

- A number of PLHIV are not falling under the selection criteria for STEP and are not able to access the scheme.
- There is no special provision for PLHIV under this scheme and PLHIV are reluctant to take this issue up as this may reveal their identity.

5. Recommendations

- Relax selection criterion and extend programme to include all women and girls living with HIV to enable them to develop skills, avail of employment opportunities and become independent.

Scheme 5

1. Name of the Scheme

Integrated Child Development Scheme (ICDS)

2. Brief Description

The ICDS is the largest programme for promotion of maternal and child health and nutrition in India and the world. The program provides an integrated approach for converging all the basic services for improved childcare, early stimulation and learning, health and nutrition, water and environmental sanitation aimed at the young children, expectant and lactating mothers, other women and adolescent girls in a community. The beneficiaries are children below 6 years, pregnant and lactating women and women in the age group of 15 to 44 yrs.

3. Relevance of the Scheme for PLHIV

- All the key services provided through the ICDS scheme, viz, supplementary nutrition, immunisation, health check-up, referral services, pre-school non-formal education and nutrition & health education are services that would improve the health of the infected mother and child and is an additional support particularly when they are on ART.
4. Issues and Challenges of PLHIV

- There are issues of access, stigma and discrimination which could lead to limited access to these services.
- AWW lacks skill, knowledge and capacity to handle health issues of infected children.

5. Recommendations

- Additional nutritional support (iron and protein rich) to girls and children living with HIV.
- Adequate sensitisation and skill building for AWW and helpers in AWC on issues of PLHIV.
- Sensitisation efforts among key stakeholders and in the community on issues of PLHIV and work on myth and misconception that will reduce stigma and discrimination.
- In villages where the number of PLHIV is high, AWC can become an outreach support for various services under NACP - like following up for antiretroviral treatment, referring known cases of high risk to Integrated Counselling and Testing Centres and STI clinics, etc.
Scheme 1

1. Name of the Scheme
Janani Suraksha Yojana (NRHM)

2. Brief Description
Launched in 2005, the focus of this scheme is to increase institutional deliveries of pregnant women in the country. Cash incentives are provided to pregnant mothers to have institutional births as well as pre- and ante-natal care are the key services offered.

3. Relevance of the Scheme for PLHIV
- Most of the infected women are from the lower economic class, requiring financial assistance to access ANC services as well as PPTCT services.
- Many of them discover of their HIV positive status during pregnancy and at the same time, have to care for an ailing husband resulting in severe social, economic and psychological trauma.
- Institutional delivery and PPTCT care are of upmost importance to reduce the risk of parent to child transmission.

4. Issues and Challenges for PLHIV
- Many PLHIV women avoid ANC services due to fear of stigma and discrimination in the health care settings. Often, the service providers are unwilling to assist in delivery and refer them to higher centres of health care. There are cases of women delivering enroute since the hospital was unwilling to assist in delivery.
- There is also a constant fear of breach of confidentiality of their status at the health care facility. Fear of revealing the status to ASHA workers would prevent many of the PLHIV pregnant women from accessing JSY.
- Limited awareness on JSY among PLHIV, especially pregnant women, due to absence of any focused awareness building among PLHIV pregnant women.
5. Recommendations

- Focused efforts at increasing awareness among PLHIV women about benefits of JSY and how to access the scheme.
- Departmental linkages and collaboration with DLN to promote early ANC registration of PLHIV pregnant women.
- Early registration during pregnancy will ensure HIV testing and reduce the risk of Parent to child transmission.
- Involvement of WLHIV in the designing and implementation of the scheme.
- Like in the northern states, the benefits of JSY through accredited private sector facilities be extended to the entire country.
- Sensitise ANMs and ASHA’s to the issues of PLHIV pregnant women and training on caring for infected pregnant women and lactating mothers.
- Sensitise health care workers (doctors, nurses) in PHC, CHC and District Hospitals to the issues of PLHIV and training them in Universal Precaution.

Other Recommendations for MOHFW

1. Free transportation for all health-related travel for PLHIV and one companion (public & private sector, reimbursement where public transport not available, ambulance for pregnant women).
2. Ensure high quality diagnostics and treatment for TB across all centres in the country.
3. Strengthen RNTCP to HIV linkages; ART to gynaecologist to CBO linkages.
4. Ensure availability of PEP for universal precaution.
5. For WLHIV, age criteria for pap smear should be waived to facilitate early detection of cervical cancer.
6. Ensure community participation in different advisory committees.
8. Ensure functional testing facilities, especially in the Northeast, in all district hospitals.
Scheme 1

1. Name of the Scheme

Rajiv Awas Yojana

2. Brief Description

Rajiv Awas Yojana (RAY) is meant for the slum dwellers and the urban poor and aims at assigning property rights to slum dwellers. Upgrading slums, the occupied land or a part thereof is allocated to the slum-dwellers to enable them to have access to housing and basic amenities such as drinking water, sewerage, drainage, street lighting, roads, social infrastructure, etc.

3. Relevance of the Scheme for PLHIV

- In many cases widows are forced to leave the house by in-laws after the death of the husbands and experience destitution.
- A number of PLHIV have left rural areas and are living in urban slums in unhygienic condition, which increases risk to their health and life.
- Poor sanitation and unhygienic conditions further reduces the immunity of PLHIV.
- This scheme looks at improving overall quality of living of slum dwellers and will play an important role in their social upliftment and self esteem.
- Various studies and discussion with PLHIV have reported that housing is one of their key requirements. PLHIV parents are scared that their children will become destitute after their death if they do not have their own house.
- Housing is one of the basic needs and providing physical comfort it gives PLHIV confidence and helps them lead a better and healthier life.
- Having a house in the urban areas – increases their access to treatment facilities.
4. Issues and Challenges of PLHIV

- Many PLHIV are living in rented houses and will not be eligible for availing benefits under RAY.
- In certain cases, PLHIV may not have the financial resources to avail this scheme.

5. Recommendations

- Include PLHIV as one of the beneficiary groups and prepare guidelines to help them access the scheme.
- Support in possible loans for PLHIV who cannot afford the cost.
- Link up with DLN and local NGOs working with PLHIVs to identify and support PLHIV in accessing the scheme.
- Application and allotment process to respect confidentiality of the PLHIV; Careful allotment to ensure that all PLHIV are not allotted houses together which will lead to stigma and ghetto-ising.
Scheme 1

1. Name of the Scheme
Dr. Ambedkar Medical Aid

2. Brief Description
This scheme envisages financial assistance to poor SC patients whose annual family income is less than Rs. 50,000/- and require surgical operation for ailments like Kidney, Heart, Liver and Cancer and any other life threatening diseases including knee surgery and spinal surgery. The maximum ceiling of medical aid is 75% of the total cost estimate of treatment or Rs. 1 lakh, whichever is lower.

3. Relevance of the Scheme

- A high proportion of PLHIV have need for regular hospitalisation due to opportunistic infections at the onset of AIDS. The cost of treatment is high and is a drain on their income.
- Many PLHIV, due to their poor health status, are not able earn regular wages and absenteeism reduces their income.

4. Issues and Challenges of PLHIV

- It is a challenge for PLHIV located in interior areas to get the application recommended by MP, DM/Collector/Deputy Commissioners, or Secretaries of concerned State/UT.
- Besides there is also an issue of breach of confidentiality, if they have to reveal their status to these officers.
- Hospital may be located at considerable distance from PLHIV residence and will require considerable time and money for travelling.
- Health care professionals not willing to undertake treatment/surgery on PLHIV due to stigma.

5. Recommendations

- PLHIV who meet the criteria should be given preference.
- Amend the scheme to ensure HIV infection is included as one of the life threatening diseases/conditions.
- Sensitise key providers about the need to maintain confidentiality.
- Develop protocols to ensure that the confidentiality of PLHIV is maintained.
Scheme 1

1. Name of the Scheme
Legal Aid Clinics

2. Brief Description
Legal Aid Clinics are intended to provide legal relief easily accessible to the indigenous and backward sections of the society. A lawyer manning the legal aid clinic provides legal services to the people. The thrust is on the basic legal services like legal advice and assisting in drafting of notices, replies, applications, petitions, etc.

3. Relevance of the Schemes to PLHIV

- PLHIV face a number of instances of stigma and discrimination at household, workplace, community and institutional levels. They constantly face issues related to loss of job or loss of property due to their HIV status. They are denied their basic right to education, health care, right to equal work opportunities, privacy & confidentiality, etc.
- PLHIV are often not aware of their rights and entitlements.
- NACO-NCAER-UNDP study shows that around 90% women are thrown out of married homes after the husband dies of AIDS.
- More than 70% of people who access legal aid clinics for PLHIV in Tamil Nadu are women and most of them are related to property rights.
- WHO study in India, Thailand, Indonesia and Philippines shows that 34% of PLHIV respondents faced breach of confidentiality in the health care settings.
- Therefore, the need for legal support is crucial.
- Dearth of NGOs, civil society in provision of legal support to the PLHIV in the country. Where they are involved, it is project-based and not sustainable. Therefore, the need for government intervention.
4. Issues and Challenges

- The fear of disclosure is one of the main reasons PLHIV do not access their rights and entitlements and when their rights are infringed do not seek legal support.
- Generally legal procedures are expensive and time consuming. So, people avoid getting into legal tangle.
- PLHIV generally face legal problems from close family members and do not want it to be made public.

5. Recommendations

- Make legal issues of PLHIV a focus area within NALSA with a focal point looking into the issues and possible interpretations of law in favour of PLHIVs.
- Training of judiciary including judges, lawyers and paralegal staff on issues of PLHIV (refer NALSA article 1987 Sec 16b).
- PLHIV need to be provided with free legal awareness about rights and entitlements through awareness building initiatives.
- Train/Engage PLHIV, especially women, as paralegal workers.
- Involve Women Resource Centre/District Level Network (DLN)/positive women representatives in the outreach for legal aid support to PLHIV.
- Speedy redressal of cases/petitions through mechanisms including existing ones like Lok Adalats.
Scheme 1

1. Name of the Scheme
Rashtriya Swasthya Bima Yojana

2. Brief Description
The scheme provides health insurance cover of Rs. 30,000 per annum to workers in the unorganised sector who are below poverty line and up to five members of their families. The yearly premium is Rs.1,511. The beneficiaries are eligible for the coverage of costs of both in-patient health care services and day care procedures that do not require hospitalisation.

3. Relevance of the Schemes to PLHIV
- A high proportion of PLHIV have need for regular hospitalisation due to opportunistic infections at the onset of AIDS. The cost of treatment is high and is a drain on their income.
- Many PLHIV, due to their poor health status, are not able earn regular wages and absenteeism reduces their income.

4. Issues and Challenges
- Not all PLHIV come under the BPL category and would therefore not be eligible for the scheme even though there is a need for such a coverage given the high cost of treatment of opportunistic infections.
- Even though a directive has been issued regarding removal of HIV from the exclusion list, most states are not aware of this.

5. Recommendation
- Automatic inclusion of PLHIV as beneficiaries irrespective of BPL status. Once done,
  - Ensure confidentiality while placing the name of beneficiaries with Gram Sabha.
  - Sensitise key providers about the need to maintain confidentiality.
  - Develop protocols to ensure that the confidentiality of PLHIV is maintained.
Scheme 1

1. Name of the Scheme
Antyodaya Anna Yojana

2. Brief Description
The scheme provides special food based assistance to destitute households comprising of the aged, infirm, disabled, old persons (above 60), pregnant and lactating mothers, widows and single women without regular support, etc. to create a hunger-free India. Antyodaya card beneficiaries are entitled to 35kgs of either rice at Rs.3 per kg or wheat at Rs.2 per kg per month at designated ration shops.

3. Relevance of the Scheme for PLHIV

- In a study done by NACO-NCAER-UNDP on Macro-Economic Impact of HIV and AIDS in India (2006), it was found that household income within the HIV household decreased by 66.25% due to rising cost of treatment and loss of job. Per capita monthly expenditure was four times higher than the non-HIV household due to treatment costs. It was also reported that close to 46% of the HIV households borrowed from money lenders to meet the rising cost of living, compared to only 27% of non-HIV households.5

- Several women face destitution and denial to property after the death of their positive husbands. They are unable to raise voice, seek justice due to fear of stigma from community.

- Loss of job due to status being known or absenteeism due to illness – results in decrease in income.

- Poverty is thus one of the major shocks experienced by an HIV household requiring support

- Malnutrition weakens the immune system increasing the vulnerability and susceptibility to infections. HIV infection further deteriorates the immune system.

- People living with HIV/AIDS are more vulnerable to many deficiencies and infections due to their poor immunity and other vulnerabilities.

5 http://data.undp.org.in/hiv/BigPicture.pdf
4. Issues and Challenges to PLHIV

- Not all PLHIV come under the eligibility criteria, but require the assistance provided by the scheme.

5. Recommendations

- Inclusion of PLHIV as automatic beneficiaries (as done in Chhattisgarh). Once done,
  - Adopt procedures and mechanisms to protect the identity and confidentiality of PLHIV.
  - Involve District level Networks (DLNs) and Targeted Intervention (TI) partners of the National AIDS Control Programme to ensure inclusion of all needy PLHIV.
  - Sensitise key providers about the need to maintain confidentiality.
  - Develop protocols to ensure that the confidentiality of PLHIV is maintained.
**Scheme1**

1. **Name of the Scheme**

   National Old Age Pension

2. **Brief Description**

   It is a fully-funded Central scheme, implemented by Panchayats and Municipalities. It is to benefit people who are 65 years or more and are destitute (no regular means of subsistence from his/her own source of income or through financial support from family members or other sources). The Central Government contribution is Rs. 200 per month per eligible person. The state contribution varies from state to state.

3. **Relevance of the Scheme**

   - WLHIV are unable to have a permanent employment or a constant source of income, as the illnesses associated with HIV make them too debilitated to work or due to the stigma associated with the positive status.
   - The woman often faces rejection from her family (both natal and marital) due to her status as a widow and as a PLHIV and thus lacks support.
   - 90% of the HIV widows in the NACO-NCAER-UNDP study were forced to leave their marital homes.
   - 79% of positive women were denied a share in their husband’s property.
   - 43% positive women were living alone.
   - The inability to work, or secure an employment causes them to be unable to generate income for the family responsibilities.
   - The PLHIVs also need to be on ART, and to respond to ART well, they need to have proper nutrition, securing which requires money.

   Thus, support from the state for subsistence becomes absolutely essential for PLHIV widows.
4. Issues and Challenges of PLHIV

- Most WLHIV become widowed at a young age and do not fall in the required age group of 65 or above years and thus, unable to access the scheme.
- Amount is inadequate given the rise in cost of materials. While rice, dal can be/being provided through other schemes, there is a need for intake of fresh vegetables and additional medicines for PLHIV. Therefore, the need for increased pension.

5. Recommendations

- Reduction of age criteria for PLHIV to 35 years.
- Increase the pension amount; Rs. 200 is a very insufficient amount.
- Make the procedures less stigmatising for PLHIV – if their status has to be revealed.
- Speedy approval and disbursal of entitlement.
Reducing Vulnerabilities

Key social protection schemes from a PLHIV perspective
